

## Press Release

October 16, 2017

**New product release at ASNT's Fall Conference October 30 in Nashville, TN.** On exhibit will be all 3 of SNI's major product platforms: Installed Sensors, UT Solutions and RVI products.

SNI's RVI Division will launch a unique new product called **JAWS 2.0™** which is the world's first ruggedized, waterproof, motorized retrieval tool with integrated color camera and LED lighting. JAWS 2.0 is the result of over 25-years of experience in the specialized field of loose-parts retrieval tooling and knowhow.

The JAWS 2.0 tool is ~1.3" (34 mm) in diameter and 7.7" (196 mm) long with interchangeable end-effectors that can open up to 3.2" (81 mm) wide and grab & retrieve heavy objects such as a 4-lb. (1.6 kg) hammer. The very short tool length allows it to navigate a 1.5D-radius elbow in a 4" - (100 mm) dia. schedule-40 pipe. The tool comes with a 50' (15 m) of detachable cable (100' (30 m) is optional) and a small hand-held power supply / controller with integral 3.5" - (89 mm) diagonal color TV monitor.

JAWS 2.0's unique design is patent pending and offered additionally with several different end-effectors including a fork-and-tine grabber, pliers, snares, magnets and material-sampling cups. Various tool-delivery hardware including fiberglass poles, flexible and adjustable elbows and a T-handle for rotational control of the tool are also available from SNI.

Sensor Networks, Inc. of Boalsburg, PA designs & manufactures productivity-enhancing ultrasonic & RVI products for the Aerospace and Energy markets.
